

Simple Business Solutions: **E-commerce** with Internet Alaska

Quick implementation

Complete security

Sensible options

Affordable

Complete E-commerce solutions

Internet Alaska is proud to offer our business web hosting customers complete E-commerce solutions through a partnership with Mercantec, one of the country's leading developers of modular online shopping functionality. We also offer complete and secured online credit card transaction processing via CyberCash, a fully encrypted process and one of the world's most trusted forms of web-based purchasing.

Flexible options

Internet Alaska offers three plans geared for every possible E-commerce need. These plans start for as little as \$50 per month, and you won't need to worry about huge start-up costs. We even offer complete Internet server security certification and domain registration services for every need.

Secure transactions

There are two ways to sell your products and services online, and your customers demand security for both. The first method is to display your offering and then "capture" a client's personal and ordering information. The second also allows a secured monetary transaction in real time using CyberCash (and your pre-existing merchant account). Our E-commerce packages are geared for either or both, and at one low monthly rate.

What you'll need

To sign up for Mercantec E-Commerce packages, you will need an Internet Alaska business web hosting account. Secure transactions also require a Verisign Secure Server Certificate (which includes the encryption software for each individual site), that can be purchased through Internet Alaska. If you would like to provide online credit card authorization and processing, you will also need to provide your pre-existing merchant account information.
